ON THE ELECTROCHEMICAL BEHAVIOR OF METALS IN THE PASSIVE STATE. [1960] [15]p. 15 refs.
Order from LC or SLA mi$2.40, ph$3.30 AEC-tr-4350

Trans. of Zhurnal Fizicheskoy Khimii (USSR) 1956, v. 30, no. 9, p. 1990-2002.

The behavior of nickel and chromium electrodes in a potassium sulfate passivating solution was investigated by measuring anodic solution rates at constant potential. Passivation of the electrode, accompanied by a change in the character of the potential dependence of the solution rate, was observed only in a definite polarization region, depending on the nature of the electrode metal. At potentials above this region the solution kinetics correspond to the Tafel equation. The hypothesis is advanced that passivation of Ni and Cr in sulfate solutions is the result of activated adsorption of the oxygen of the water on their surfaces, (Chemistry--Physical, TT, v. 5, no. 7) (over)
